

Today's Key Take-aways

- Technology projects are complex – **and our project is complex**, specifically:
 - Communications- a lot of fast-moving parts- *evolving daily*.
 - WDAs with justifiably unique needs.
 - Awesome technology solution (Launchpad) that has not been implemented statewide before.
 - The technical approach requires the vendor to make the source code available to ESD forever.... an excellent, yet very uncommon practice
 - Hiring technologists in 2023 is ... hard.
 - The project requires people to implement – and people are complex!
 - Statewide, we have exceptional people working on this project who are experts in complex project implementations.... and we are glad they are here.
